

Medifax pc+™

*User-Friendly Software That
Complements Your Business*

Medifax pc+ is an easy to use Windows-based software application that performs patient insurance eligibility verification functions. This powerful product gives you access to the crucial eligibility information of all payers on the *Medifax EDI* network 24 hours a day/7 days a week.

Powerful Batch Processing Feature

Medifax pc+ has the ability to verify patient eligibility individually, during registration, or for a group of records called "batches". The batch-processing feature allows you to store groups of records to be processed as needed. You will be able to create a "Medicaid Pending" file and easily check patients who have applied for Medicaid. Without rekeying this information, this file can be run periodically to determine eligibility saving you both time and money. You can enter the data (batches) by manually keying or by electronic file transfer via floppy disc or PC interface.

Medifax pc+ also gives you the ability to screen aging private or self-pay accounts to determine retroactive eligibility prior to collection activities. There are various tools that are available to help integrate with your practice management system.

All types of healthcare providers can benefit from using Medifax pc+. The batch feature makes this product especially attractive for physician practices, medical groups, business offices, billing services, Ob/Gyn, nursing homes, home health, admitting, and more.

Other Features & Benefits

- Easy to use
- Much faster than verifying eligibility over the phone
- Ability to print the eligibility response
- Supports dozens of health plans for eligibility verification including your state Medicaid, surrounding state Medicaid, Medicare, and commercial plans
- Provides batch data entry feature
- Eliminates human error
- Improves patient information
- Can add plastic card reader to your keyboard without using a serial port

Medifax EDI™
Your Healthcare Connectivity Partner

Let us assist you
with your HIPAA
compliance initiatives

Technical Requirements

- IBM compatible personal computer with:
- Operating System - Windows 95 or higher
 - Memory/RAM - 32Mb minimum; larger batches require more memory
 - Hard Drive - 15Mb minimum
 - Modem - Hayes or compatible
 - Printer - Any Windows-supported printer
 - Processor - Pentium (200 MHz)

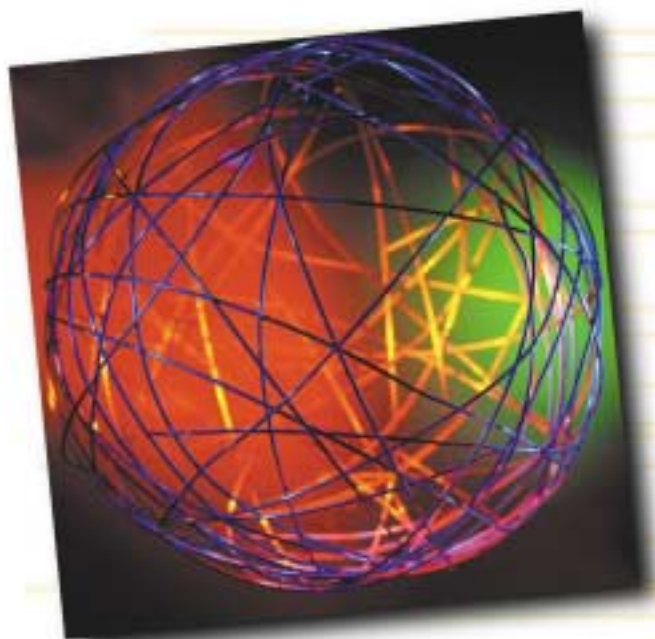

Medifax pc+ was designed for stand-alone PC's. However, a PC on a LAN may be used in most instances as long as the PC has its own Hayes compatible modem and the software will be running on that machine.

Through innovative products and services, **Medifax EDI** is enabling healthcare providers to improve cash flow, integrate healthcare information, reduce costs and reduce patient registration time. We have a full range of solutions, for virtually any platform, that allow providers to save time and money and focus on what's really important - their *patients*.
